

Stamisol® DW – for metal roofing constructions

Different systems, ventilated metallic roof with a double structure.

1. **Profiled roof**
2. **Profiled Z with seal joint (Ventilation space)**
3. **Stamisol® DW**
Glue the overlaps and connections with the Stamisol® glue
4. **Various insulation systems**
5. **ABS or Stamisol® SD 70 vapour breaks**
The overlaps and connections should be glued using the Stamisol® self-adhesive strips so that the air seal is tight.
If necessary, fix the wall connections using the butyl rubber or, for example, with Sikaflex 11FC.
6. **Interior trapezoid profile, ceiling**
7. **Weight-bearing construction**

Planning reference

Stamisol® DW can be installed and glued both horizontally and vertically.

The specifications given by the suppliers of the system must be respected

Depending on the layout of the building, the vapour breaks will have to be adapted to the construction of the roof in question.

Installation instructions

The instruction specifications must be respected.

The statics and planning principles supplied by the different metallic construction manufacturers must imperatively be respected.

**Planning and execution: according to SIA 238
New SIA 232**
