

## Stamisol® – connector strip for chimneys, raised sections etc.

Sheet of flexible PVC (open to diffusion) for all connectors.

The connectors for chimneys, wall-edges and raised sections are prepared and tailored to specifications with the Stamisol® connection strip on-site and are then glued using the Stamisol® glue.

Glue the Stamisol® preformed corners using the contact gluing method to ensure that the seal is watertight and will not allow flow-back.

### Tender text reference

Pos. 754.270

Pos. 785.320

### Planning reference

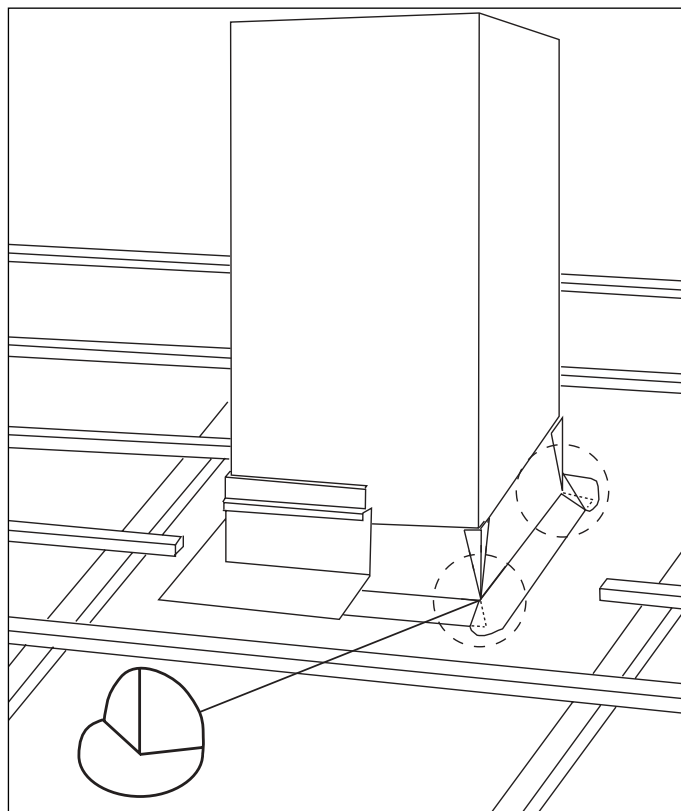

The flexible Stamisol® connection strip enables all edging and raised sections to be glued uniformly.

### Installation instructions

The installation instructions must be respected.

Be especially meticulous in overlapping and gluing the corners. To ensure that the seal is watertight and will prevent flow-back, use the preformed Stamisol® corners.

The Stamisol® connection strip can also be used on other materials.

Planning and execution: according to SIA 238
