

→ Recommended applications for façade breather membranes

STAMISOL® Color

Weatherproof breather membrane for transparent and open-joint façades

Stamisol® Color is permanently resistant to UV rays. It represents the perfect choice for creative ventilated façades behind transparent and open-joint cladding materials. The wide colour range available gives architects freedom of expression, as amazing colour effects and combinations can be designed.

STAMISOL® FA

Durable protection of open-joint façades

Stamisol® FA is perfectly suitable for ventilated façades with a metal or wood substructure. Only the original gives you the certainty of an unlimited UV resistance, as innumerable projects in the last 25 years have shown. The best conditions for a long-lasting, good looking and all-round satisfying application within ventilated open-joint façades.

STAMISOL® FI

Breather membrane for closed or slightly open façades (joints up to 15mm)

Open to water vapour diffusion, rainproof and wind tight, Stamisol® FI offers an excellent thermal protection. It is suitable for installation behind closed or slightly open cladding materials (<15 mm). Light, efficient and easy to install, Stamisol® FI has unique qualities for all kind of non-transparent, ventilated façades.

- The Ferrari® Group supports professionals: architects, consultants, carpenters, roofing-, façade- and general contractors, and makes available to its partners the company's experience, knowledge and photographic library of projects unique worldwide in terms of international references.
